

Overview for Families, Carers & Support Workers

- Membo Noticeboard is a digital Noticeboard system that needs the internet to work.
- It includes an App that displays the Noticeboard and an online Hub with additional features
- All people under a Membership use the same account credentials, and view the same Noticeboard on their respective mobile phones and tablets (devices)
- **If there are technological challenges**, once set up, there is no need for a User to touch the tablet to view the Noticeboard
- Information on the Noticeboard can be instantly updated in the App and in the online Hub and access is provided by the Account Holder.
- **The Noticeboard App** displays daily appointments, notes eg answers to recurring questions, and photos on tablets and mobile phones
- Multiple people can install the App, and can be enabled by the Account Holder to update the information displayed, or to just view it
- **The online Hub** has additional important features including one-time recurring appointment setup in the diary, appointment display image, audible alarm, low battery alert for a designated device, and a central place to share notes that don't appear on the Noticeboard
- **Notifications** can be sent from the Hub for free through the App to any or all Members
- **Support Workers** can be allowed by the Account Holder to access their online Hub which would include access to member account details, device management and other areas. If preferred, Support Workers can be allowed to access the Organisation Hub which provides direct access ONLY to the Client's diary to update their appointments & related notes.
- **Visitor Attendance Records** from support teams and others can be typed onto the Noticeboard. They go into the online Hub where they can be viewed at any time. The Account Holder can enable any device to view Attendance Records.
- **Noticeboard Settings** are accessed in the App and apply to each individual device under the Membership. Settings include font size, night light settings, the ability for the Noticeboard to automatically revert to a given display page and other key features.
- **Photos** can be uploaded for display and will take over the screen for a short period of time after which the App automatically reverts to the preferred Noticeboard display page
- **A voice-activated** version of the App is available for the vision-impaired
